***Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 18-23 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 5,600,672 in view of Glenn.

The patented claim discloses all the claimed limitations, except for "the first data stream has data for demodulation including synchronization data allocated at predetermined equal intervals". Glenn discloses a system wherein "code generating circuitry" (Fig. 1, element 220) generates a plurality of "code signals", to be transmitted with a first signal, including synchronization information of the second transmitted signal (see Abstract, col. 4, lines 13-24). It would have been obvious to one of ordinary skill in the art at the time of the invention to use the teachings to the patented claim and Glenn, collectively, to implement a system as claimed. Transmission of "synchronization information" enhances the demodulation process at the receiver.

Art Unit: 2634

3. Claims 18-23 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 13-18, 24-29 of copending Application No. 09/668,068, 09/680,176. Although the conflicting claims are not identical, they are not patentably distinct from each other because omission of a feature whose function is not needed would have been within the level of one skilled in the art at the time of the invention.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 18-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chung et al (US 5,214,656) in view of Glenn.

Chung et al discloses all the claimed limitations (see Fig. 2), except for "the first data stream has data for demodulation including synchronization data allocated at predetermined equal intervals". Glenn discloses a receiver (Fig. 3) of a system wherein "code generating circuitry" (Fig. 1, element 220) generates a plurality of "code signals", to be transmitted with a first signal, including synchronization information of the second transmitted signal (see Abstract, col. 4, lines 13-24). It would have been obvious to one of ordinary skill in the art at the time of the invention to use the teachings to the co-pending claim and Glenn, collectively, to implement a system as claimed. Transmission of "synchronization information" enhances the demodulation process at the receiver.

#### ***Reissue Applications***

4. In accordance with 37 CFR 1.175(b)(1), a supplemental reissue oath/declaration under 37 CFR 1.175(b)(1) must be received before this reissue application can be allowed.

Claims 18-23 are rejected as being based upon a defective reissue declaration under 35 U.S.C. 251. See 37 CFR 1.175. The nature of the defect is set forth above.

Receipt of an appropriate supplemental oath/declaration under 37 CFR 1.175(b)(1) will overcome this rejection under 35 U.S.C. 251. An example of acceptable language to be used in the supplemental oath/declaration is as follows:

"Every error in the patent which was corrected in the present reissue application, and is not covered by a prior oath/declaration submitted in this application, arose without any deceptive intention on the part of the applicant."
